

1. Save the image created in assignment 1 as a Docker image

```
sudo docker commit c1 dockerimage08
```

```
sudo docker image
```

2. Launch container from this new image and map the port to 81

```
sudo dockernrun -itd -p 81:80 --name c2 dockerimage08
```

```
sudo docker run -itd -p 81:80 --name c2 dockerimage08
```

```
sudo docker exec -it c2 bash
```

3. Go inside the container and start the Apache2 service

```
apt update
```

```
apt install apache2 -y
```

```
service apache2 status
```

```
service apache2 start
```

```
history
```

```
exit
```

```
which apache2
```

```
service apache2 status
```

```
service apache2 start
```

4. Check if you are able to access it on the browser
