1.Create a sample HTML file

sudo nano index.html

sudo nano Dockerfile

2. Use the Dockerfile from the previous task

FROM ubuntu

RUN apt update

RUN apt install apache2 -y

ADD . /var/www/html

ENTRYPOINT apachect1 -D FOREGROUND

3. Replace this sample HTML file inside the Docker container with the default page

sudo docker build . -t assignment5

sudo docker images

sudo docker run -itd -p 84:80 assignment5
